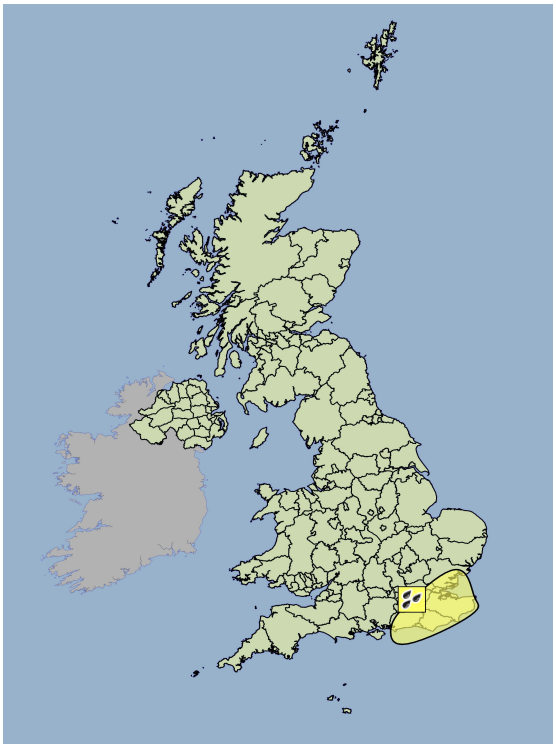
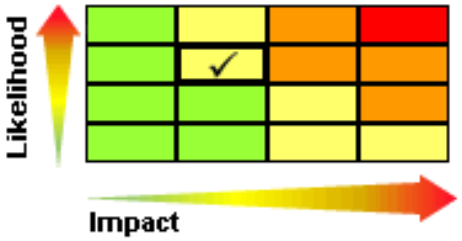
National Severe Weather Warning Service





Chief Forecasters Assessment
An active frontal system will become slow-moving for a while overnight across southeastern parts of England. Exactly where this happens is subject to fairly low confidence but regardless of this, some bands of quite intense rainfall seem likely to develop for a time, with the risk of thunder. Many locations seem likely to see 20 mm of rain, while a few places receive more than 30 mm within 6 hours.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **19:00 on Sat, 08th Nov 2014** until **08:00 on Sun, 09th Nov 2014**

Outbreaks of rain will turn heavier and more persistent during Saturday night and the early hours of Sunday, clearing during the morning.

The public should be aware of the risk of minor surface water flooding, perhaps exacerbated by leaves blocking drains.
